Greetings from Your Community Butterfly & Gardening Group

Now that the weather has turned cooler, we are busy sprucing up our 7 habitat areas. There is lots of weeding, new plants and mulching going on and the butterflies are everywhere. Our gardens were initially planted with the Monarch butterfly in mind. Different varieties of milkweed were used (the larval host plant, aka: caterpillar food) and nectar sources (flowers they love for food). Over the years we have added "host" plants to attract different butterflies. Gulch Fritillaries, White Peacocks, several types of Swallowtails, several Sulphurs, Skippers and of course our state butterfly, the Zebra Heliconian, can be seen flying around our gardens. Like all living organisms, butterflies suffer from a loss of habitat and a garden of native plants represents a return to a natural and evolving system. Creating a situation that emulates nature will become self-regulating and eliminate the need for constant maintenance and pest control.

Although we do talk about butterflies, our group is constantly learning what works in Sweetwater's habitats and are trying to find the right mix of both native and non-native plants that will both attract butterflies and provide some color and beauty to our community. If you would like to share your knowledge and/or learn with us, please join us at a meeting on the 1st and 3rd Tuesday of each month at 10:00 AM.

As always, thank you for your support!
